

Upgrade Instructions For Codelock License Manager

Note: Follow these instructions only if you have a network version of Managing For Success[®] and a Novell version 3.12 or later network operating system.

Note: You MUST have administrative privileges to the system to do this installation. If you have not already downloaded Haspserv.nlm from www.ttiupgrade.com do so now.

Removing the current NetHasp License Manager

1. Shutdown your current NetHasp License Manager from the system console by typing “unload haspserv.nlm.
2. Delete the Haspserv.nlm module from the “system” directory.

Installation Instructions For The New NetHasp License Manager

These instructions should be done from a workstation running Microsoft Windows 95/NT or later.

1. Run Windows Explorer and copy the new Haspserv.nlm file that you downloaded from www.ttiupgrade.com to the “System” sub-directory on the fileserver.

These instructions should be done on the system console.

1. On the system console type: **load haspserv.nlm -addrpath=sys:\hasp -ipxnosap**
(where SYS is the volume name of the hard drive on the fileserver where the HASP sub-directory resides) If the License Manager is working properly you will see a box with protocols supported like: IPX or Netbios.
2. Press Ctrl + Esc to exit the window.
