

## Upgrade Instructions For Codelock License Manager

**Note: Follow these instructions only if you have a network version of Managing For Success<sup>®</sup> and Windows 95, 98 or Me.**

Note: You MUST have administrative privileges to the system to do this installation. If you have not already downloaded Lmsetup.exe from [www.ttiupgrade.com](http://www.ttiupgrade.com) do so now.

### Installation Instructions For The New NetHasp License Manager

1. Double-click on the file Lmsetup.exe that you downloaded from [www.ttiupgrade.com](http://www.ttiupgrade.com). Click on the **Next** button to continue the installation process.
2. The Welcome screen for the NetHasp License Manager box will appear, click on the **Next** button to continue.
3. Click the **Next** button to accept the default installation path.
4. Select **Put into Startup Folder** and click the **Next** button to continue.
5. Click on the **Next** button on the default program folder name.
6. Click on the **Yes** button to install the HASP Device Driver. Note: If you are running an anti-virus program you will experience a delay in the installation of the device driver. Wait for the program to tell you it has been successfully installed.
7. Click on the **Yes** button when asked: "Would you like to start the HASP License Manager now?" The License Manage icon will appear in the system tray.
8. Click on the **Finish** button to finish the installation.
9. If prompted, restart your computer by clicking on the **OK** button.

Note: The NetHasp License Manager, when loaded, will appear in the system tray. The NetHasp License Manager MUST run at all times in order for any workstation on the network to access it. This program is necessary to run the Software Collection in network mode.
